

ANTINO LABS

Creating Values Through Convergence

Overview:

Inventory Management is a software application for stationary shops in which users (clients) can manage their inventory according to their stationary products. This will help the client in time management and also will help in reducing the manpower, also the client will the digital overview of their inventory which will further reduce the other fixed costs like maintaining and creating offline records, analysis of sales, accounting costs etc.

Objectives:

- The software should be able to save the clients resources (time and money)
- Stationery inventory data should be accessible at any time and anywhere by just logging in to the systems.
- The software will be used by non-technical people therefore the design and navigation of the pages should be easy.

Features:

- Sign-In Page
- Dashboard
- Inventory Category
- Sub-Inventory List
- Product Details
- Sales History
- Accounting Page (Sales Report)
